IIS Installation

Initial installation

Prerequisites

To complete the application's installation on the windows server, it must meet the following needs:

- iisnode
- .NET 5 hosting bundle

Steps

1. Create two Sites. -> Backend -> Frontend

2. Set the Application pool to unmanaged.

3. Import the zip file into the relative sites.

4. Setup environment variables. See Configuration

5. Restart both applications

Updating the applications

Follow **only** step 3 from Initial installation.

Beware: do not overwrite the site files unless you have a backup of all saved static content.
